

MOHAMED ABDUL HAMEED

Support Operations & Automation Engineer

Jeddah, Saudi Arabia · Remote, worldwide
emah84@gmail.com
github.com/Mohamed-AH · linkedin.com/in/mojed7

Automation-focused engineer who builds tooling to remove repetitive operational work. After a decade+ owning an end-to-end Oracle JD Edwards operations workflow, I built the scripts and integrations that automated it away — an **LLM-powered pipeline (Claude API) that cut manual handling by 90% across 3,300+ work orders**. I'm comfortable debugging across a Node/Python full stack, running production systems with Sentry and Grafana, and writing the clear docs and incident notes a remote team runs on. **CKA and Oracle Cloud certified**.

01 CORE SKILLS

SUPPORT & TOOLING	Internal tooling & scripting, process automation, error handling with retry & validation logic, PDF / data extraction
AI WORKFLOWS	LLM-powered automation in production operations — Claude & Gemini API integration, prompt / field-mapping pipelines
DEBUGGING & MONITORING	Sentry, Grafana, log analysis, incident triage, root-cause investigation across the stack
FULL-STACK	Node.js, Express, REST APIs, MongoDB, JavaScript (ES6+), Python, Bash / Shell
SYSTEMS & CLOUD	Linux administration, Docker, Kubernetes (CKA), Oracle Cloud, Cloudflare Workers / R2, data migration
WAYS OF WORKING	Git & CI/CD, clear technical writing & documentation, autonomous ownership, async remote collaboration

02 EXPERIENCE

2011 — Present

BT Applied Technology
Jeddah, SA

Operations

- Owned an end-to-end Oracle JD Edwards work-order operation in a construction environment for over a decade — the recurring, manual queue that this work eventually automated away.
- Built the tooling to remove that work: an **LLM-powered automation pipeline** (Python, JavaScript, VBScript, AutoIt) with Claude-API PDF extraction and field mapping — **3,300+ work orders processed at a 90% reduction in manual handling time**.
- Designed it as five integrated components with retry logic, validation, and logging at every stage, so failures surface clearly instead of silently — plus the day-to-day troubleshooting to keep it running in production.

2022 — Present

100Devs
Cohort 2

Full-Stack Development — 100Devs

- Self-taught full-stack development with the 100Devs community (JavaScript, Node, MongoDB); built and now operate the production platforms below — owning their deploys, monitoring, and user issues end to end.

03 SELECTED PROJECTS

JDE Work Order Automation System

FLAGSHIP · INTERNAL TOOLING

Deployed at BT Applied Technology

Internal automation that removed a manual operations queue end to end — **Claude-API PDF extraction** and field mapping through to automated inventory and document handling. Five integrated components with retry logic, validation, and logging; **running in production and processing work orders weekly**.

Python · JavaScript · VBScript · AutoIt · Claude API · Browser automation

Fablewurud

PRODUCTION PUBLISHING PLATFORM

rasmi Hassan.com · source

Live full-stack publishing platform serving a real user base — **3,200+ audio files, 116 PDFs, and 300+ articles** with full-text search. Node/MongoDB, Google auth, media on Cloudflare R2 and Oracle Cloud, with **Sentry and Grafana wired in for error tracking and monitoring**.

Node.js · MongoDB · Google Auth · Cloudflare R2 · OCI Storage · Sentry + Grafana

Hafiz

FULL-STACK · PWA

live demo · source

Cloud-synced, installable PWA in production — multi-user auth with OAuth (Google + GitHub) and JWT on Node/Express and MongoDB Atlas, plus an on-device speech-recognition feature that runs entirely in the browser. Handles the real edge cases of auth, sync, and offline use.

Node / Express · MongoDB Atlas · OAuth + JWT · Web Speech API · PWA

CRM Builder

OFFLINE-FIRST · DATA INTEGRITY

source

Configurable, offline-first CRM with local-first sync — IndexedDB with a service worker for full offline use, JSON backup/restore, and Google OAuth on a Node/Express + MongoDB backend. Built to keep data consistent across intermittent connectivity.

Node / Express · MongoDB · IndexedDB · Service Worker · Google OAuth

04 CERTIFICATIONS

Certified Kubernetes Administrator (CKA)	Linux Foundation · 2025
OCI Migration Architect Professional	Oracle Cloud · 2025
OCI Networking Professional	Oracle Cloud · 2025
OCI Generative AI Professional	Oracle Cloud · 2024

05 EDUCATION

100Devs Software Engineering

Full-stack bootcamp · 2022

Intensive full-stack program — JavaScript, Node, Express, MongoDB, REST APIs, and modern web development practices.
